

DID YOU KNOW?

Miscounting is the easiest way to lose money, but also the easiest problem to fix.

Manual counting is both time and labor consuming.

Manual counting creates disagreements between sellers and buyers.

Manual counting makes producers dependent on their workforce for the counting precision.

AUTOMATE THE COUNTING OF YOUR PIGS

MINIMIZE YOUR LOSSES

Minimize your losses by paying/getting paid for the right number of animals.

SAVE TIME

Save time and focus on what really matters: your animals and your business.

PRODUCTION TRANSPARENCY

Have a video proof of your counting sessions to share with your clients and suppliers as a transparency tool.

HAVE PEACE OF MIND

Have peace of mind that the count will be reliable no matter the day of the week or the period of the year.

SMART COUNTING

AUTOMATIC PIG COUNTER

HOW IT WORKS

Smart Counting uses a **camera** to count pigs of all sizes and colors with a **guaranteed minimum accuracy of 99.9%**. Animals are counted or discounted depending on the direction in which they move through an alleyway, and humans are not counted. The count can be started and stopped by pressing a button and the result is available in real time on the hardware or on any device (smartphone, tablet, computer) via an intuitive web application.

The new and robust **Edge Intelligence (EI) Platform** on which the smaRt Counting software runs allows to permanently install the hardware directly in the barn or to move it from one barn to the other, if required. The Ro-Main EI Platform is the world's first edge computing hardware that makes artificial vision possible in the extreme conditions of an animal barn (IP67).

BENEFITS AND ADVANTAGES

- Install the EIP (Edge Intelligence Platform) directly in the barn or move it from one barn to the other
- User friendly, as simple as pressing start and stop
- Real-time counting
- Reliable in the extreme conditions of an animal barn
- 99,9% guaranteed accuracy
